HISTORY: Throughout history, diamonds have been regarded as magical. Greeks believed diamonds were tears of the gods. Romans believed they were splinters of fallen stars. Diamonds were also believed to have been used as a healing stone. They were used for detecting and detoxifying poison, opening spirituality channels and to assist in calming creatures.

LAB GROWN DIAMOND *Melee/Non-Certified*

HISTORY: Lab grown diamonds are man-made diamonds that are chemically, physically, and optically identical to diamonds originating from nature. Both have the same chemical composition and atomic structure, producing the very same durability, fire, and sparkle. Laboratory grown diamonds are a testament to the use of technology and human achievement.

CARE & HANDLING

No special care required. Can be cleaned with commercially available cleaners. Sudden impacts may cause breakage or chipping.

Precious · Semi-Precious · Birthstone

HISTORY: There are many powerful characteristics that Amethysts have been thought to have. Centuries ago, ancient healers believed Amethyst could help their psychic thoughts and intuitions. Some people thought the Amethyst power could heal headaches or insomnia. This stone was also thought to give the wearer a feeling of calm and happiness.

CARE & HANDLING

May be cleaned using commercially available jewelry cleaners or warm soap and water, rinse with warm water and dry with a soft clean cloth. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone or contact with rough surfaces or abrasive materials that may scratch the stone. Avoid prolonged exposure to sunlight or heat as it may cause the color to fade.

GARNET - RHODOLITE *Natural*

HISTORY: Rhodon is a Greek word that means rose colored, which is where the rhodolite garnet gets its name. It is said that Noah would get light at night with the help of a garnet that would glow in a lantern. It is thought to cure depression, protect against bad dreams, and relieve diseases of the liver and bleeding. The ancient Greeks thought the stone could protect children from drowning. It was also thought as protection against poisons.

CARE & HANDLING

May be cleaned using commercially available jewelry cleaners or warm soap and water, rinse with warm water and dry with a soft clean cloth. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone or contact with rough surfaces or abrasive materials that may scratch the stone.

GARNET - SPESSARTITE *Natural*

HISTORY: In the 1800's, the Spessartite garnet was discovered in Germany at the Spessart mountain range. It has been said that this stone can bring out compassion, help a person's self confidence and allow one to be open to change. It is also believed that this stone provides health benefits like healing and helping an appetite, kidneys, blood circulation and the bladder.

CARE & HANDLING

Avoid prolonged exposure to direct sunlight. May be cleaned using a commercially available jewelry cleaner or with soft cloth and warm soapy water. Be sure to rinse stones well to remove soapy residue. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone and avoid contact with other gemstones as scratches may occur.

HISTORY: The tsavorite garnet is made up of a calcium-aluminum garnet that gets the green color from vanadium or chromium. The stone got its name from a park in Kenya called the Tsavo East National Park. It has been said that this stone can help the skin, kidneys and fertility. It is also believed that tsavorite garnets create confidence, cooperation and strength.

CARE & HANDLING

May be cleaned by gently scrubbing with a soft toothbrush and a solution of mild dish soap and warm water. Rinse with warm water and dry with a soft clean cloth. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone or contact with rough surfaces or abrasive materials that may scratch the stone. Avoid prolonged exposure to heat.

HISTORY: Lapis lazuli is a stone that dates back to many ancient civilizations and has often been found in tombs. It is prized for its rich blue color which attracted people to grind up the stone and use it in paints and ancient forms of makeup. Some people believe the stone symbolizes royalty, wisdom, power, love and healing.

HISTORY: The Ethiopian opal was discovered more recently in the 1990's. It's a top crystal material, meaning it has high transparency, generally considered to be the highest quality Opal. It is a hydrophane crystal, which means it absorbs moisture.

CARE & HANDLING

Special care required. Hydrophane generally indicates a material that is absorbent when immersed in liquid. Keep away from cleaning agents, perfumes, oils or liquids as they can be absorbed and may alter color and/or appearance. Avoid sudden or extreme temperature changes. Avoid steam and ultrasonic cleaners. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone or contact with rough surfaces or abrasive materials that may scratch the stone. Wipe with a clean soft cloth. If the stone is accidentally immersed in water and changes appearance, the color will slowly come back as the water evaporates from the stone. This can take a couple of hours or a few days.

SPECIES: Opal

HARDNESS: 5-6

TOUGHNESS: Very poor to fair

ENHANCEMENT: N, SC

REFRACTIVE INDEX: 1.42-1.44

OPTIC CHARACTER: SR, ADR (Common)

SPECIFIC GRAVITY: 1.74-1.89 (prior to soaking in water)

PHENOMENA: Play of color

QUALITY:

AAA: Light background with vivid play of colors

REACTIONS

Ultrasonic: Never

Steamer: Never

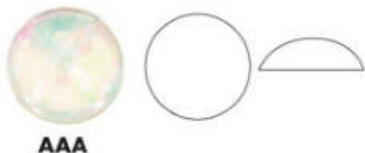

Heat: Very poor; may cause cracking

Chemicals: Avoid immersion in ANY liquid.

Remove stone during sizing with heat.

SOURCES: Myanmar, Vietnam, Tanzania and Sri Lanka

HISTORY: The peridot stone has shown up in stories throughout history from the Hawaiian Islands to the ancient Egyptians. It has also been said that the famous Napoleon Bonaparte presented a peridot gemstone to his future bride as a gift and token of his love. People have thought that the peridot possesses the power to purify negative thoughts, strengthen the eyes and cure asthma in a powdered form.

HISTORY: Named after it's discoverer, Sid Pieters, this stone has been described as a brecciated variety of tiger's eye. Unlike tiger's eye, the chatoyant field is not observed as a continuous band, offering a chaotic chatoyancy instead. It is believed to bring protections, enhance courage and promote transformation.

QUARTZ - GREEN *Natural*

HISTORY: Green quartz, also known as prasiolite, goes through a heat-treating process to achieve its color. Its name means leek stone in Greek as a reference to the pale green color. As a healing stone, it is said that it can help clear and remove toxins in the body.

CARE & HANDLING

Avoid prolonged exposure to sunlight or heat as it may cause the color to fade. May be cleaned using commercially available jewelry cleaners or warm soap and water, rinse with warm water and dry with a soft clean cloth. Avoid rubbing on rough surfaces that may cause scratches or harsh blows that may fracture or chip the stone.

HISTORY: The aluminum within the smoky quartz allows the stone to get its smoky brown color. Smoky quartz is Scotland's national gem due to their Cairngorm mountain range where many smoky quartz stones come from. It is believed that the stone can help with insight, clarity, cooperation and dealing with negativity.

SPECIES: Quartz
HARDNESS: 7
TOUGHNESS: Good
ENHANCEMENT: H
REFRACTIVE INDEX: 1.544-1.553
OPTIC CHARACTER: DR
SPECIFIC GRAVITY: 2.66
PHENOMENA: None
QUALITY:

AA: Light grayish-brown to dark brown

REACTIONS

Ultrasonic: Usually safe

Steamer: Risky

Heat: Poor; color change may occur with heat, may fracture under abrupt temperature changes

Chemicals: Hydrofluoric acid, ammonium fluoride

OPTIC CHARACTER: DR
SPECIFIC GRAVITY: 3.53
PHENOMENA: Chatoyancy (Rare)

QUALITY:

AA: Medium to dark bluish-teal

REACTIONS

Ultrasonic: Risky

Steamer: Risky

Heat: Poor; color change and/or fracturing may occur.

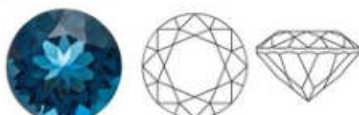

Chemicals: Alkaline cleaning and/or electroplating may affect color.

SOURCES: Brazil, Sri Lanka, India, Uruguay, Madagascar, Germany, Australia, Mexico, Africa, Russia, United States.

CARE & HANDLING

May be cleaned using commercially available jewelry cleaners or warm soap and water, rinse with warm water and dry with a soft clean cloth. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone or contact with rough surfaces or abrasive materials that may scratch the stone. Avoid prolonged exposure to sunlight or heat as it may cause the color to fade.

TOPAZ - MYSTIC *Natural*

HISTORY: Mystic Topaz starts as a colorless topaz and goes through a process called vacuum deposition, which adds a permanent coating of titanium to the back of the gem. Mystic Green (MG) has a green body color, which shows flashes of purples and reds. Mercury Mist (MM) has a white body color, which shows flashes of blues, greens, purples and reds. Fire Topaz (MOR) has a morganite colored coating which gives it the peachy-pink color.

CARE & HANDLING

Gently scrub with a soft toothbrush and a solution of mild dish soap and warm water.

TOURMALINE - CHROME *Natural*

HISTORY: Found in the East African country of Tanzania, this stone is considered one of the most intense green hued gemstones and one of the most valuable in the world. Its vibrant emerald color comes from chromium and traces of vanadium. Considered to have a high healing capacity, promoting joy, happiness and compassion.

CARE & HANDLING

Avoid prolonged exposure to heat or sunlight as it may cause the color to fade. Clean with warm, soapy water and rinse. May also be cleaned using commercially available jewelry cleaners. Dry with soft clean cloth. Avoid storing near other gemstones as scratches may occur. Also avoid rubbing on rough surfaces that may cause scratches or harsh blows that may fracture or chip the stone.

SPECIES: Tourmaline

HARDNESS: 7-7.5

TOUGHNESS: Good

ENHANCEMENT: N

REFRACTIVE INDEX: 1.624-1.644

OPTIC CHARACTER: DR

SPECIFIC GRAVITY: 3.06

PHENOMENA: Chatoyancy, color change (rare)

QUALITY:

AAA: Medium light to dark bluish green hues

GEM: Medium to dark yellowish green

REACTIONS

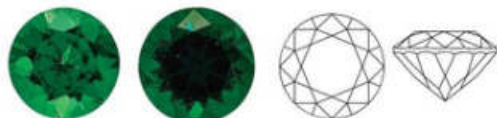

Ultrasonic: Never

Steamer: Risky

Heat: Fair to poor; may cause color change

Chemicals: None

SOURCES: Tanzania

HISTORY: Traces of iron and titanium are responsible for the green color in the stone's composition. Green Tourmaline was once believed to protect the wearer against dangers, bad decisions, and misfortune. Today is believed to inspire creativity, attract luck and success and to give strength and courage. When heated, it becomes electrically charged, making it popular for use in many industries. This stone is also thought to help treat motion sickness.

CARE & HANDLING

Avoid prolonged exposure to heat or sunlight as it may cause the color to fade. Clean with warm, soapy water and rinse. May also be cleaned using commercially available jewelry cleaners. Dry with soft clean cloth. Avoid storing near other gemstones as scratches may occur. HISTORY: Pink tourmaline is said to help release stress, worries, depression and anxiety. People believe the stone can stimulate feelings of joy, happiness, love and relaxation. It is also thought to provide comfort and calming as well as helping with sleep troubles. Tourmaline has industrial uses due to its ability to hold an electric charge when heated.

SPECIES: Tourmaline
HARDNESS: 7-7.5
TOUGHNESS: Fair
ENHANCEMENT: H, R
REFRACTIVE INDEX: 1.624-1.644
OPTIC CHARACTER: DR
SPECIFIC GRAVITY: 3.06
PHENOMENA: Chatoyancy, color change
QUALITY:
AA: Medium to dark pink, good cut, some inclusions. Shades of pink vary.
REACTIONS
Ultrasonic: Risky
Steamer: Risky
Heat: Fair to poor; may cause color change
Chemicals: None
SOURCES: California, Brazil, Afghanistan, China, India, Myanmar, Pakistan and Sri Lanka

CARE & HANDLING

Avoid prolonged exposure to heat or sunlight as it may cause the color to fade. Clean with warm, soapy water and rinse. May also be cleaned using commercially available jewelry cleaners. Dry with soft clean cloth. Avoid storing near other gemstones as scratches may occur. Also avoid rubbing on rough surfaces that may cause scratches or harsh blows that may fracture or chip the stone.

CREATED

Moissanite • Gemstone • Birthstone

HISTORY: Discovered in 1893 by Dr. Henri Moissan, and later named for him, Moissanite traces its origins to a meteor crater where particles were found in Arizona. Given the scarcity of the natural occurring material, over the years scientists worked hard to create Moissanite in a laboratory. With the help of technology, scientists finally succeeded in producing a stone with near-colorless properties that is durable, and yields incredible brilliance and fire.

HISTORY: Alexandrite is thought to assist one in centering the self, reinforcing self esteem, and to broaden one's ability to experience joy. The color changes under different lighting conditions. If viewed in fluorescent light (daylight), its color is purple to greenish-blue. Under incandescent light (candle light) the stone changes to a raspberry pink color.

CARE & HANDLING

May be cleaned using commercially available jewelry cleaners or mild soap and warm water, rinse with warm water and dry with a soft clean, cloth. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone or contact with rough surfaces or abrasive materials that may scratch the stone.

CUBIC ZIRCONIA *Created*

HISTORY: A crystalline form of the metallic element zirconium dioxide. Made in a laboratory by melting powdered zirconium and zirconium dioxide together. It has been said it contains the ability to give good health, financial prosperity, position, prestige and high honors. Is thought to promote sound sleep, a good and outgoing mood and give happiness, strength and energy to the wearer.

CARE & HANDLING

May be cleaned using commercially available jewelry cleaners or warm soap and water, rinse with warm water and dry with a soft clean cloth. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone or contact with rough surfaces or abrasive materials that may scratch the stone. For color stones, avoid prolonged exposure to sunlight or heat as it may cause the color to fade.

SPECIES: Synthetic Cubic Zirconia

HARDNESS: 8.5

TOUGHNESS: Good (Unless highly strained)

ENHANCEMENT: SYN

REFRACTIVE INDEX: 2.15

OPTIC CHARACTER: SR

SPECIFIC GRAVITY: 5.80

PHENOMENA: None

QUALITY:

A: Low luster and shine, slightly cloudy appearance, less durable

AAA: More highly polished, better luster and shine, almost colorless

REACTIONS

Ultrasonic: Usually safe

Steamer: Usually safe

Heat: Usually safe

Chemicals: None

SOURCES: China, Austria, United States

HISTORY: A crystalline form of the metallic element zirconium dioxide. Made in a laboratory by melting powdered zirconium and zirconium dioxide together. A diamond-like carbon coating is added to the stone to reduce the chances of abrasions.

SPECIES: Carbon Coated CZ
HARDNESS: 8.5-9.2
TOUGHNESS: Good
ENHANCEMENT: Ion injection and heat
REFRACTIVE INDEX: 2.36
OPTIC CHARACTER: SR
SPECIFIC GRAVITY: 5.5g/cm³
PHENOMENA: None
QUALITY:
WH: AA
REACTIONS
Ultrasonic: Unsafe
Steamer: Unsafe
Heat: Unsafe
Chemicals: Unsafe
SETTING: Cold setting
SOURCE: China

CARE & HANDLING

May be cleaned using commercially available jewelry cleaners or warm soap and water, rinse with warm water and dry with a soft clean cloth. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone or contact with rough surfaces or abrasive materials that may scratch the stone.

HISTORY: Also known as Helenite, a man made glass, it was created by heating volcanic rock dust and particles from the eruption of Washington's Mt. St. Helens in 1980. Discovered when workers were using torches to try and salvage equipment that had been damaged by the volcanic eruption. The intense heat, along with the rock that has high concentrations of silica, aluminum and iron with traces of chromium and copper, was melting into a brilliant green glass. Now created in laboratories.

CARE & HANDLING

Clean with lukewarm soapy water, using a very gentle brush. Dry with a soft cloth. Do not clean with commercial cleaners. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone. Care should be taken with storing Mount St. Helens as contact with other gemstones may cause scratches and chips. Avoid prolonged exposure to sunlight or heat as it may cause the color to fade.

CARE & HANDLING

Cuts and polishes like a Garnet. May be cleaned using commercially available jewelry cleaners or warm soap and water, rinse with warm water and dry with a soft clean cloth. Avoid situations that involve sharp harsh blows to the jewelry that may fracture or chip the stone or contact with rough surfaces or abrasive materials that may scratch the stone. Avoid prolonged exposure to sunlight or heat as it may cause the color to fade.

PROPERTIES

PROPERTY	DESCRIPTION
REFRACTIVE INDEX (RI)	Measures how much slower light travels through a gemstone than in air. It is one of the most reliable gem properties. The stone's normal RI range is listed here along with the potential variance. Doubly refractive stones have two readings. The RI's given correspond to yellow light having a wave-length around 590 nm.
OPTIC CHARACTER	Indicates whether the stone is singly or doubly refractive (SR or DR). Also indicates when to expect anomalous double refraction (ADR) or an aggregate reaction (AGG).
HARDNESS	A material's resistance to scratching given in the Mohs hardness scale. This is a relative scale, with gems ranked as having the ability to scratch other gems that are ranked the same or lower.
TOUGHNESS	A material's resistance to breaking.
SPECIFIC GRAVITY	The ratio of the density of a substance compared to the density (mass of the same unit volume) of a reference substance. The typical value is listed, followed by either a single plus-or-minus figure or separate plus and minus variation figures. Specific Gravity can vary due to the presence of impurities or inclusions; however, it usually falls within a specific range.
SPECIES	The mineral family of the gemstone. Each species has a physical (usually crystalline) structure and a well defined chemical composition. Most species include a number of different types of material with variations that are usually based on color and transparency; each of these is called a VARIETY.
PHENOMENA	The ability of a gem to display any unusual (rare) optical properties such as Asterism (stars), Chatoyancy (cat's eye), Color Change, Adularescence, etc.
ENHANCEMENT	The treatment type or enhancement procedure used on the gemstones.

REACTIONS

REACTION	DESCRIPTION
ULTRASONIC	Indicates if it is safe (or not) to use ultrasonic cleaning on the gem.
STEAMER	Indicates if it is safe (or not) to use steam cleaning on the gem.
HEAT	Indicates if it is safe (or not) to expose the gem to heating (i.e. during soldering for sizing or prong tipping).
CHEMICALS	Chemicals to avoid

ENHANCEMENTS

SYMBOL	ENHANCEMENT	DESCRIPTION
B	Bleaching	The use of heat, light and/or other agents to lighten or remove a gemstone's color.
C	Coating	The use of such surface enhancements as lacquering, enameling, inking, foiling or sputtering of films to improve appearance, provide color or add other special effects.
D	Dyeing	The introduction of coloring matter into a gemstone to give it new color, intensify present color or improve color uniformity.
F	Filling	The filling of surface-breaking cavities or fissures with colorless glass, plastic, solidified borax or similar substances. This process may improve durability, appearance and/or add weight.
H	Heating	The use of heat to effect desired alteration of color, clarity and/or phenomena. If residue of foreign substances in open fissures is visible under properly illuminated 10X magnification, H F should be used.
HP	Heat & Pressure	The use of heat and pressure combined to effect desired alterations of color, clarity and/or phenomena.
I	Impregnation	The impregnation of a porous gemstone with a colorless agent (usually plastic) to improve durability and appearance.
IMIT	Imitation	Imitation gemstones can be made up of any material and are used to copy or imitate the look of the real gemstone. The composition and properties are different than the real gemstone.
N	Natural (Not-enhanced)	The "N" symbol appears on the chart only for natural gemstones which are not currently known to be enhanced (Alexandrite, Garnet, etc.). However, the "N" symbol can also be used for other natural gemstones in the event that a gemstone has received no enhancement and the seller will provide a guarantee that there has been none. That gemstone must be accompanied by a commercial document, such as an invoice, memorandum and/or a laboratory report, to support the fact that the gemstone is not enhanced.
O	Oiling/Resin Infusion	The filling of surface-breaking fissures with colorless oil, wax, resin or other colorless substances, except glass or plastic, to improve the gemstone's appearance.
R	Irradiation	The use of neutrons, gamma rays or beta particles (high energy electrons) to alter a gemstone's color. The irradiation may be followed by a heating process.
SYN	Synthetic	Synthetic gemstones are usually identical in composition and in visual appearance to its naturally occurring counterparts. Synthetic gemstones have been created, not found or mined in nature.
U	Diffusion	The use of chemicals and high temperatures to produce ARTIFICIAL color change and/or asterism-producing inclusions. Note: It is a violation of the FTC Guides to fail to disclose diffusion on gemstones in advertising, promotional literature or commercial documents. See GIM for additional information regarding disclosure.
W	Waxing/Oiling in Opaque Stones	The impregnation of a colorless wax, paraffin or oil in porous opaque or translucent gemstones to improve appearance.
ASBL	Assembled	Multiple layers or combinations of manufactured and/or natural material fused, bonded or otherwise joined together to increase stability and/or imitate the appearance of a natural gemstone.
CMP	Composite	Different elements are used in the construction of the stone.
